Technical facts

- Electronic mixer with detachable nozzle with integrated control panel.
- Easy to use: all functions can be controlled with one hand (flow, temperature, jet setting), even with the nozzle detached.
- Two jet settings (normal and spray)
- Temperature indicator light
- Time out function switches the mixer off after 10 minutes of inactivity.
- Memory function remembers the most recent flow, temperature and jet settings.
- Safety function prevents the mixer from starting without the cold water running (scalding protection)
- Back-up batteries ensure uninterrupted function even if the power cuts out.

Electrical box

A small electrical box is fitted discreetly under the sink unit and plugged into the electrical network. A backup battery ensures uninterrupted function if the electricity cuts out.
